# Method 1-j

## Brocket, Muntjac, Pudu, and Tufted Deer

**N.B.** Unlike other deer species these animals are measured to the nearest $^{1}/_{16}$ of an inch.

**Length:** Measure the main antler on the center of the outside curve from the lowest edge of the burr to the tip. **(L)** The tape must not be pressed into the groove above the burr.

**Circumference:** Measure the circumference of the burr. **(C)**

**Typical**

**Tines:** All deer for this method have 1 typical tine per side with the exception of the muntjac. Only tines that are found on a typical 1x1 or 2x2 frame of the species may be measured.

**Muntjac only** (2x2 typical frame): Measure the length of brow tine, which must be at least 0.5 inch (1.2 cm) in length. Measure from the main antler to its farthest extending point. **(T1)** All deer included in this method have no other typical points.

**Inside Span:** Measure the widest distance between the main antlers at a right angle to the long axis of the skull. **(F)** Total score is the sums of the above measurements.

**Nontypical**

**Tines:** Measure the length of all nontypical tines of at least 0.5 inch (1.2 cm). Measure from the base to its farthest extending point. (Supplemental)

Count the number of typical tines per side. (Supplemental)

Count the number of nontypical tines per side. (Supplemental)

Comments (Note trophy repairs, remeasuring, and so on, here):
