Method 2
Caribou and Reindeer

Length: Measure the main antler on the center of the outside curve from the lowest edge of the burr to the tip of the longest point of the crown. The tape must not be pressed into the groove above the coronet. **(L)**
Measure the shovel from the main antler to its farthest extending point. **(L1)**
Measure the bez from the main antler to its farthest extending point. **(L2)**

Circumference: Measure the smallest circumference between the shovel and the bez. **(C1)** Measure the smallest circumference between the bez and the top palm. **(C2)** If there is a rear point, this can be either above or below the rear point. Measure the circumference of the top palm at its greatest point between any two tines. **(C3)**

Length of Top Tines: Measure the two longest tines on the palm or top half of the main antler. **(T1& T2)**

Count: All tines of 0.5 inch (1.3 cm) or more in length, include the tip of the main antler. To count as a point a tine must have a length that is equal to or greater than its base.

Width: Measure the shovel (brow) from the top point to bottom point at a right angle to the main axis of the shovel. **(W)** Use a caliper to do this. If the shovel is not palmated and just a spike, enter a value of "1" for its score as long as it is at least one Inch in length.

Inside Span: Measure the widest distance between the main antlers (not any points) at a right angle to the long axis of the skull. **(F)**

Greatest Spread: Measure at a right angle to the long axis of the skull. **(G)**

Ranking/Score: Caribou are ranked on a cumulative score of the lengths **(L, L1, L2)** and circumferences of the main beams **(C1, C2, C3)** the lengths of the two longest tines in the top **(T1, T2)** widths **(W)** the shovels, the score of the number of tines (one point per tine) and the inside span **(F)**.

Comments (Note trophy repairs, remeasuring, and so on, here):
