Signature _____ (Official Use Only _____ / _____)

Method 15 Markhor

Length: Measure each horn around the spiral by keeping the tape on top of the spiral ridge. Start at the lowest point at the front (or back) of the base and proceed to the tip. Where the spiral ridge ends near the tip, proceed in a straight line to the tip and do not continue to spiral. Many markhors have a front and a rear spiral. This measurement may be taken on the front **OR** rear spiral. If taken on the front, **both** horns must be measured on the front; if taken on the rear, both horns must be measured on the rear. Record the higher measurements. **(L)** The Chilton wild goat must be measured under 7-b.

Circumference: Measure the base of each horn. **(C)** The tape must form a continuous loop and be at a 90-degree angle to axis to the horn. Do not press the tape in any grooves and do not follow the jagged edge of the horn base.

Growth Rings: Count the rings on both horns. (Supplemental)

Comments (Note trophy repairs, remeasuring, and so on, here):

If you want your certificate, book or plaque shipped to a different address enter it here.
