Signature _____ (Official Use Only ____/____)

Method 9 Pronghorn

Rank on Total Score.

Length: Measure each horn along its outside surface, following the centerline of the horn to the tip. Start at the base. To find the starting point, find the lowest point on the horn, and from there draw a straight line at a 90-degree axis to the horn. This line is the starting point. **(L)** Next, measure the prong along the top, outside edge from the tip to the center back edge of the horn. **(LI)**

Circumference: Measure the base of each horn at a 90 degree angle to the axis of the horn. **(C)** The base measurement must **(1)** form a continuous loop, **(2)** be over horn material at all times, and **(3)** be at a 90-degree angle to the axis of the horn. It must not span any air gaps

Comments (Note trophy repairs, remeasuring, and so on, here):
